WORK EXPERIENCE

Universaltech

Junior Software Developer

JUN 2025 - JUN 2026

- Built a WordPress/Event Espresso attendance confirmation system using configurable cron schedules, wp_mail(), Twilio SMS, Twilio response webhooks and admin-side response tracking.
- Developed an admin dashboard to record notification delivery, attendee responses and registration status so event teams could follow up from one WordPress panel.
- Built a fuzzy scoring matching algorithm for CSV bulk imports that reconciles student registrations against physical records using weighted field analysis (Email: 70%, Phone: 50%, Names: 40%), auto-approving matches at $\geq 90\%$ and queuing ambiguous matches ($\geq 60\%$) for manual review.
- Customized Event Espresso registration and checkout behavior using WordPress actions, filters and plugin extension points while preserving compatibility with core plugin flows.
- Integrated an internal e-sign agreement product with the registration workflow and Google Drive storage for signed agreement documents.
- Used Claude with Figma design context to create GlobalSpaces planning documentation, including architecture notes, UI design specs, component specs, user flows and landing-page plans.

Software Developer Intern JAN 2025 - JUN 2025

- Completed training in Git/GitHub workflows, Agile development frameworks, and WordPress core architecture including actions, filters, and plugin extension lifecycle events.

EDUCATION

Vishwakarma Institute of Technology

Bachelor of Technology in Computer Science - 8.2 CGPA

2020 - 2024

PROJECTS

Spic – Native Low-Latency Linux Voice Copilot [🔗](#)

- Engineered an ultra-low latency ($< 300\text{ms}$) background daemon in Python for 100% local speech-to-text processing
- using PipeWire raw PCM streaming, energy-based VAD, and CPU-quantized (int8) faster-whisper.
- Bypassed Wayland desktop sandboxing by building a Linux Kernel /dev/uinput virtual hardware keyboard driver, enabling direct keystroke injection at 1.5ms/char with a hands-free "Tap-to-Start, Action-to-Finish" activity watcher.

Automated LeetCode Video Generation Pipeline [🔗](#)

- Built an automated video production engine in Python that translates coding submissions into animated YouTube tutorials using LLM-driven scripting and programmatic Manim scene generation.
- Engineered an audio-visual timestamp syncing scheduler using FFmpeg, an automated YouTube upload integration, and fault-tolerant pipeline state management validated across 328 tests.

SKILLS

Languages :- C++, PHP, JavaScript, HTML, CSS, SQL, Python

Frontend :- React, jQuery, responsive UI, CSS animations, Intersection Observer API, Swiper JS, Tailwind CSS

Backend :- WordPress plugin development, Event Espresso, Elementor, Node.js, REST API, JWT, authentication flows

Databases :- MySQL, PostgreSQL, query optimization, CSV data processing, SQL Caching Tables

Tools/Cloud :- Claude, Antigravity, Git, GitHub, Docker basics, AWS basics, Playwright, Twilio, Google Drive integration, Linux

DSA :- [Leetcode](#)
